GENERAL INFORMATION

(1) Are there requirements regarding the data management from your scholarly/scientific community?

❖ yes

(a) If yes, what are the requirements?

❖ DFG Guidelines on the Handling of Research Data

(2) What kind of dataset is it?

The following questions collect information on the data that is produced or used in the project. They also help to estimate the value of the data in terms of potential re-use and long-term preservation. In the case of personal data, the principle of data minimization (Art. 5 EU General Data Protection Regulation) allows the collection of personal data only when there are no other reasonable means to clarify the research question (re-use of existing data would be such a reasonable means). Also, there shall be no more information collected than necessary. The information regarding the data collected, produced, or used in the project is gathered along the datasets. The definition of these datasets is an important conceptual decision that has to be done individually and carefully for each project.

Name of Experiment / Acronym / Number:	German Masked Priming
PI or responsible person (head of the study):	Harald Clahsen
Other persons involved:	Anna Jessen
Subject area:	Psycholinguistics, morphological processing of German participles (regular and irregular)
Method / Type of data:	Reaction time data
Anonymizable data:	yes
Participants:	32 healthy German adults as control group 110 healthy Turkish-German bilingual adults
Short description (of the study):	Masked priming study (word recognition based on reaction time and accuracy) with five conditions: regular participles, irregular participles 1 (without stem change), irregular participles 2 (with stem change), semantic and orthographic together with fillers and nonwords to investigate the morphological processing and variability in German native and Turkish-German bilinguals
Other comments:	
Time for data collection (approximate):	February - December 2018
Time for data analysis (approximate):	Spring and Summer 2019
Related publications:	
Keywords (used in publications):	
Link to preregistration:	
Funding reference:	Funded by the Deutsche Forschungsgemeinschaft (DFG, German Research Foundation) – Project number 317633480 – SFB 1287

(3) Which individuals, groups or institutions could be interested in re-using this dataset? What consequences does the reuse potential have for the provision of the data later?

It is important to specify whether the data will be permitted for reuse. But legal impediments, such as privacy, and copyright must be taken into account.

- ❖ Transcribed data are anonymizable and can be released to others.

TECHNICAL INFORMATION

(4) Where is the dataset stored during the project?

Please delete all project-files from source that is not part of the University of Potsdam.

for raw data:	Researcher´s Computer Computer in the laboratory
for analysis data:	Researcher´s Computer External Hard Disk Drive
for further documentation, related code, or software:	Researcher´s Computer

(a) If data is stored on lab or personal computers, please describe the backup strategy.

- ❖ Data from personal computer is backed up on an external hard drive
- ❖ Data is also stored on lab computer
- ❖ Data will be stored on PRIM server (internal documentation)
- ❖ Data will also be stored on OSF platform (external documentation)

(5) Which file formats are used?

When choosing a data format, one should consider the consequences for collaborative use, long-term preservation as well as reuse. It is advisable to use formats that are standardised, open, non-proprietary, and well-established in the respective scholarly community. A table with recommended file formats can be found in [Kristin Briney, Data Management for Researchers, Pelargic, 2015, pages 133-134.](#)

- ❖ Reaction time data (raw and processed): *.txt, .csv and excel-files
- ❖ R-scripts and code

PUBLICATION

(6) Will this dataset be published or shared?

anonymizable data

- ID will be removed (and or code-list will be destroyed) [legally correct: code list will be destroyed as soon as possible without jeopardizing experiment; exception: follow-up study planned, if so, talk to UP data protection officer (Dr. David Kneis; <mailto:datenschutz@uni-potsdam.de>) on how to do this correctly]
- Publication of anonymized data and code on OSF or RADAR (University of Potsdam) (or as required by the Journal)

non-anonymizable data

- on RADAR (University of Potsdam) but not accessible from the outside world

❖ yes

(a) If yes, under which terms of use or license will the dataset be published or shared?

The options refer to the licenses of the Creative Commons family. If data is anonymised / pseudonymized, it's probably not legally required, but might be good in terms of research ethics to adjust consent forms / subject information sheets.

Principal investigator of the study assures that the consent form / subject information sheets support publishing of the data.

for data:

CC 0 (Public Domain) (recommended)

for scripts: GNU General Public License (GPL) (recommended)

for software: GNU General Public License (GPL) (recommended)

(b) If yes, when will the data be published?

Recommended procedure: Upload data and obtain digital identifier (e.g., DOI, OSF link) when submitting the first paper; thus, you can cite the data in the paper. If necessary, restrict public access (embargo) until last paper published (max. 2 years).

❖ when the paper is published

(c) If no, please explain why not. Please differentiate between legal and contractual reasons and voluntary restrictions.

(7) Which measures of quality assurance are taken for this dataset?

- ❖ A pretest session is conducted to ensure that participants do not see any of the primes.
- ❖ Nonwords were included to check if participants did the task attentively.
- ❖ Data are analyzed for outliers and accuracy in the responses (by the person who analyzed the data).
- ❖ We made sure that all bilinguals had a high level of German proficiency.

LEGAL AND ETHICS

(8) Does this dataset contain personal data?

The EU General Data Protection Regulation (GDPR) defines in Art. 4 personal data as "any information relating to an identified or identifiable natural person". An identifiable natural person is "one who can be identified, directly or indirectly, in particular by reference to an identifier such as a name, an identification number, location data, an online identifier or to one or more factors specific to the physical, physiological, genetic, mental, economic, cultural or social identity of that natural person".

For advice and/or trainings on how to comply with privacy regulations - including proper anonymization & pseudonymization - you can always contact UP's privacy officer, Dr David Kneis, at datenschutz@uni-potsdam.de. As the privacy officer, his perspective is focussed more on the legal side of things than the research ethics or technical aspects.

❖ no

(9) Are the data anonymised?

Anonymised data: ID will be removed (and or code-list will be destroyed) [legally correct: code list will be destroyed as soon as possible without jeopardizing experiment; exception: follow-up study planned, if so, definitely talk to UP data protection officer on how to do this correctly]

for raw data: No, but pseudonymized

for analysis data: No, but pseudonymized

for published data: No, but pseudonymized

(10) Does the project use and/or produce data that is protected by intellectual or industrial property rights?

Measurement data has no intellectual property, so usually, the answer here will be „no“. Data or software can be subject to intellectual or industrial property rights. Applicable laws differ broadly even within EU. According to the German copyright law (UrhG) works of literature, scholarship and the arts that can be regarded as a “personal intellectual creation” are protected by copyright. Mere data, e.g., measured data or survey data, and metadata (except in some cases descriptive metadata) are not protected by copyright. § 2 of the UrhG lists the following kinds of protected works (list is not concluded):

-
- linguistic works such as written works, speeches, and computer programs
 - works or the fine arts including works of the applied arts as well as sketches of such works
 - works of photography
 - descriptions and illustrations of scholarly or technical nature such as drawings, plans, maps, sketches, tables, and three-dimensional representations

According to § 3, copyright is also applicable to translations and other modifications or adaptations of work if they are individual intellectual creations of the editor. Finally, according to § 4 copyright also extends to collected editions and database works. Collected editions are: “collections of work, data or other independent elements that are individual intellectual creations based on the selection and arrangement of the elements”.

Database works are defined as “collected editions, the elements of which are arranged in a systematic or methodical way and can be accessed individually by electronic means or in other ways”.

❖ no

(a) If yes, please explain which!

STORAGE AND LONG-TERM PRESERVATION

(11) Does this dataset have to be preserved for long-term?

The DFG expects primary data that is the basis of a publication to be stored in the researcher's own institution or an appropriate nationwide infrastructure long-term (for at least 10 years).

- ❖ At least 10 years after the end of the first funding period of the SFB1287.

(12) What are the reasons this dataset has to be preserved for the long-term?

- ❖ Used in a publication / proof of good scientific practice
- ❖ Re-use (if anonymizable data) in subsequent projects or by others
- ❖ Legal obligations
- ❖ Documentation, because it is relevant to society
- ❖ Self-commitment
- ❖ Proof of good scientific practice
- ❖ By DFG requirements

(13) Where will the data (including metadata, documentation, and relevant code) be stored or archived after the end of the project?

- ❖ OSF
- ❖ SFB1287 - File Server
